Summary

U.S. Army veteran moving into Linux systems administration, networking, and IT operations after two decades of designing, documenting, and keeping multi-component systems running. I operate a multi-node Linux infrastructure lab and am preparing for the LFCS exam (target September 2026). I am looking for technician and administrator work with MSPs and internal IT teams.

Skills

- **Linux administration:** Ubuntu and Rocky Linux, Proxmox VE, systemd, LVM, permissions, package management, rebuild procedures
- **Networking and access:** VLANs, OPNsense, routing fundamentals, Tailscale and WireGuard, ACLs, remote SSH, Starlink and mesh Wi-Fi
- **Infrastructure operations:** multi-node homelab, Nextcloud, Ceph, Docker, Borg backups, service documentation, change discipline
- **Troubleshooting and design:** signal-flow / process-flow diagnosis, phased implementation, root-cause work under time pressure
- **Reliability and documentation:** SOPs, runbooks, inventories, audit-ready records, Lean Six Sigma Yellow Belt (DMAIC)
- **People and delivery:** training non-technical operators, stakeholder communication, ticket ownership, handoff so systems run without one person
- **Scripting and data:** Bash, Python fundamentals, Git, SQL / PostgreSQL fundamentals
- **AI-assisted operations:** Grok Build CLI, Claude Code, Ollama (local models), Gemini CLI, GitHub Copilot — used for documentation, scripting, study, and lab automation, with human review of the result

Infrastructure in practice

Multi-node private lab

Independent lab in daily use · 2025 – Present · github.com/DestroyTheKraken

- Design and operate a multi-node Linux cluster for file services, collaboration, backup, and remote

access as a Google Workspace replacement.

- Network segmentation, VPN access, 2FA, user and group quotas, and written runbooks for rebuild and day-to-day operations.
- Public notes and installers (Nextcloud hub, SSH/UFW/Tailscale bootstrap, [homelab spec sheets](#)) with AI tooling and human review.

This is daily infrastructure work — design, implementation, documentation, and reliability — on real hardware, not unused coursework.

Experience

Linux systems, networking, and IT operations — career transition

Independent professional development · Omak, WA · July 2025 – Present

- Completed Linux Foundation LFS101 (April 2026) and LFS207 (April 2026); badges on Credly. LFCS exam purchased; target September 2026 (voucher through March 2027).
- Completed Google AI Essentials on Coursera (September 2025, five courses) and Nucamp Python Fundamentals and Web Development Fundamentals.
- Build and maintain live Linux and network services. Use local and hosted AI tools as a learning and documentation aid while remaining the operator who tests and owns the result.

County Compliance Planner

Okanogan County Office of Planning & Development · March 2024 – July 2025

- Processed permits and applications against county and state requirements.
- Maintained official records and wrote departmental standard operating procedures.

This built the same habits as change control, ticket notes, and audit-ready IT operations.

Senior pastor and organizational leader

New Life Center / New Life Church, Okanogan, WA · December 2022 – January 2025

- Ran day-to-day operations for a small nonprofit: scheduling, facilities, communications, volunteers, and public-facing work.
- Used DMAIC process improvement to rebuild policies, budgets, reporting, and leadership training; membership moved from 18 to 55 and finances from an annual loss to a surplus.
- Administered collaboration platforms (Google Workspace, Planning Center, Breeze) and trained staff and volunteers on those systems.

Multi-hat operations, systems implementation, and end-user training — the same pattern as a small IT shop or MSP bench with limited headcount.

Training systems and S6 support

U.S. Army, 1st Medical Brigade, Fort Hood, TX · 2013 – 2016

- Administered enterprise training information systems (DTMS / ATRRS) for 3,500+ soldiers and kept records audit-ready.
- Supported S6 with PC deployment, VOIP, AV systems, and SharePoint; completed Army IT training covering VMs, hardware, and collaboration platforms.
- Wrote and validated SOPs for severe-weather and CBRNE response; supported large-scale exercises involving 4,000+ personnel.
- Awards: Army Commendation Medal, Army Good Conduct Medal, two Special Achievement Medals.

Closest prior match to enterprise IT operations: information systems, endpoint and comms support, SOP design, and reliability under operational pressure.

Audio systems engineer and consultant

Self-employed · 2005 – 2025

- Designed, installed, and optimized multi-component sound-reinforcement systems; diagnosed signal-chain failures during live events.
- Operated a mobile recording studio end-to-end and trained volunteer operators to run systems after handoff.

Systems design, live troubleshooting, and operator training — infrastructure work expressed as signal flow rather than packets.

Education and certifications

- **LFCS** — exam purchased; target sitting September 2026 (voucher through March 2027). Additional path: CompTIA Linux+ and Network+ within 12 months.
- Linux Foundation **LFS101**: Introduction to Linux (Credly, 3 April 2026) · **LFS207**: Linux System Administration Essentials (Credly, 15 April 2026).
- Google AI Essentials specialization, Coursera / Google (12 September 2025) — five courses.
- Nucamp — Python Fundamentals; Web Development Fundamentals.
- Lean Six Sigma Yellow Belt (Alison).
- Master of Theology, Crown Institute of Theology (Washington state-licensed), 2020–2026.
- U.S. Army Medical Training Center — Patient Administration certificate; Army IT / VM / SharePoint training.
